1. CALL TO ORDER – 2:00 p.m.
   A. Approval of Agenda
   B. Approval of Minutes – December 12, 2018 (backup)

2. INTRODUCTIONS

3. PUBLIC COMMENT

4. REPORTS
   A. Utility Update – Eric Larson, P.E. (backup)
   B. Monitoring Update – Eric Larson, P.E. (backup)
   D. Stormwater Related Projects – Eric Larson, P.E. (backup)
   F. Regional Coordination – Eric Larson, P.E. (backup)
   G. Municipal Reports – Eric Larson, P.E. (backup)
   H. MS4 Update – Eric Larson, P.E. (backup)

5. UNFINISHED BUSINESS
   A. Voting for Stormwater Management Utility Board Chairman and Vice Chairman

6. NEW BUSINESS
   A. Evergreen Project Award (backup)
   B. Alljoy Regional Study (backup)
   C. Annual MS4 Report (backup)

7. PUBLIC COMMENT

8. NEXT MEETING AGENDA
   A. March 13, 2019 (backup)

9. ADJOURNMENT
Beaufort County Stormwater Management Utility Board (SWMU Board) Meeting Minutes

December 12, 2018 at 2:00 p.m. in Executive Conference Room, Administration Building, Beaufort County Government Robert Smalls Complex, 100 Ribaut Road, Beaufort, South Carolina

Draft Minutes 1/16/2018

Board Members
Present
- Don Smith
- Marc Feinberg
- Allyn Schneider
- William Bruggeman
- James Fargher
- Patrick Mitchell

Absent

Ex-Officio Members
Present
- Andy Kinghorn
- Kim Jones
- Van Willis

Absent
- Scott Liggett

Beaufort County Staff
- Eric Larson
- Melissa Allen
- Katie Herrera

Visitors
- Dr. Alan Warren, USCB Lab
- Alice Howard, County Council
- Lamar Taylor, City of Beaufort
- Brian Eber, Town of Hilton Head Island
- Ellen Comeau, Clemson Extension
- Keith Hall, Contractor

1. Meeting called to order – Don Smith
   A. Agenda – Approved. (Moved Voting of Chairman and Vice Chairman to Item B)
   B. November 14, 2018 Minutes – Approved.

2. Introductions – Completed.

3. Public Comment(s) – None.

4. Reports – Mr. Eric Larson and Mr. David Wilhelm provided a written report which is included in the posted agenda and can be accessed at: https://www.bcgov.net/departments/Administrative/beaufort-county-council/boards-and-commissions/council-appointed/board-list/stormwater-management-utility-board/agendas/2018/121218.pdf

   Mr. Eric Larson introduced Mr. Keith Hall, contractor with Beaufort County to serve as the Assistant Stormwater Manager. He will be on retainer for 60 to 90 days to help with Capital Projects.

   A. Utility Update – Eric Larson

      In reference to item 2A (Regionalization), the consultants have met with all partners in the project and created a list of questions to ask stakeholders (those using stormwater design standards) within the community. They questions will be going out soon.
B. Monitoring Update – Eric Larson
   Please reference the report, no additional updates.

C. Stormwater Implementation Committee (SWIC) Report – Eric Larson
   Please reference the report, no additional updates.

D. Stormwater Related Projects – Eric Larson
   In reference to item #1, Mr. Larson noted that two responses were received for the Evergreen 319 Project. These will be reviewed and staff hopes to have a selection made before the next meeting.

   The County received the DOT permit last week for Wallace Road project. The solution has been approved and staff is working to get the project scheduled; the work will be done in house.

   In reference to item #4, Mr. Larson shared a sample of cellulose concrete, an innovative product which is one-fourth the weight of regular concrete. This will be used on the admin parking lot. The pipe is bedded on old timber and there is concern that concrete or fill would cause settling over time. This product is pumped in like a grout.

   Mr. Larson explained that there is a long outstanding and unwritten policy that the County will install driveway pipes for $399 (item #8). An accounting problem about handling the money to provide the service came up, which led to the purpose of installing them (to ensure they were done correctly). He explained that there have only been 10 requests last year in comparison to over 800 single family home permits that were issued. The County has decided they are no longer going to install them, as the fee doesn’t even cover the cost.

E. Professional Contracts Report – Eric Larson
   In reference to item 1B (Brewer Memorial) County Council reconsidered the change order that was denied during the November meeting and approved it during the December 10th meeting.

   In reference to item 1C (Sawmill), the field survey was better than GIS and it determines that the County is not getting the stormwater storage or the benefit needed to justify the cost of the project. It isn’t a feasible project and will stay in its natural state. The County’s recommendation is to not move forward with the project. Brief discussion took place about the history and funding for the acquisition of the property. Mr. Larson indicated the County is planning to cancel the contract and stop work.

F. Regional Coordination – Eric Larson
   In reference to item #5 (Pepper Hall), the project passed with a 50/50 provision for stormwater. Mr. Larson explained that Ms. Alice Howard took his engineering report and presented it Council. In response to a question, Mr. Larson explained the County doesn’t know the cost [but it will be 50%] of stormwater design, construction and maintenance of the project.

   Ms. Howard thanked the board for asking questions about Pepper Hall and thanked Mr. Larson for providing information. She encouraged members to continue to express their opinions it to the elected officials, as it’s a flexible agreement and could change. Mr. Van Willis commented about not knowing how it will impact the balance of Capital Improvement Projects (CIP) plan or fee structures in Beaufort County unincorporated. Mr. Larson
explained there is talk about a residential improvement district and that the County may be able to recoup funds through something like this. Mr. Willis asked if the board was asked for a recommendation or if they were told the money was coming from the utility. Mr. Larson explained it was stated in a public meeting that the anticipated revenue was from stormwater utility.

Conversation took place about the road (Graves Road) to get to the park. Mr. Andy Kinghorn commented about regionalization and how it will be a separate entity where they [elected officials] wouldn’t be able to come in and take money away [to fund project]. Mr. Larson commented the utility would be protected from that happening (if it were a regional authority).

G. Municipal Reports – Eric Larson

Mr. Larson provided an update for the Battery Creek 319 project. He explained there is an operations and maintenance list: vac truck to remove trash and the weir needs additional rip rap. He commented that the emergency weir is in good shape and there is a downed tree on the work shelf that will need removed. Mr. Larson indicated he spoke with Paul Moore, design engineer, who has made a few recommendations to look at to play with elevations of the ponds.

Ms. Kim Jones thanked the utility for the “That’s My Truck” decals for Town of Bluffton’s street sweeper.

H. Municipal Separate Storm Sewer System (MS4 Update) – Eric Larson

Mr. Larson announced that there were three grand prize winners and six runners up for the “That’s My Truck” coloring contest. The “celebrity” panel for the contest judging was Eric Larson (Beaufort County), Beth Lewis (Town of Bluffton), Alice Howard (County Council), Ellen Comeau (Clemson Extension), and Shelby Berry (Beaufort Conservation District). They selected the winners to name the County Vac Truck, County Sweeper Truck and the Town of Bluffton’s Sweeper Truck. The winning schools will get a show and tell to see the truck and to present the awards. May River Montessori, Port Royal Elementary and Mossy Oaks Elementary were the winning schools. Ms. Ellen Comeau noted the contest was open for two and half weeks and there were 472 entries.

I. Maintenance Projects Report – Eric Larson

Please reference the report, no additional updates.

5. Unfinished Business –

A. Battery Creek 319 Update – Topic was discussed under item G (Municipal Reports).

6. New Business

A. Best Management Practices Manual and Monitoring Plan Update – Mr. Larson explained this update is an administrative update to the manual. The handout provides an overview of the changes to the manual. Mr. Larson noted all updates [major] that are being made have been previously reviewed and voted on by the board.

Mr. Larson explained that extra steps were in the manual versus what was in the ordinance, so that oversight will be corrected. A major update has been made to the monitoring plan, which is in an administrative document to address the TMDL’s and special project monitoring. The dirt road definition will be updated. The update will also be expanding land disturbance; clarifying
design criteria to the developing public. The change to the permitting process with DHEC will also be reflected in the update.

A motion was made to approve the changes as proposed to the BMP manual. The motion was approved 6/0.

B. Voting for Stormwater Manager Utility Board Chairman and Vice Chairman – Mr. Donald Smith announced that he has informed Councilman Dawson that he will be resigning from the board around the first of the year.

Mr. Allyn Schneider asked about the replacement for the Mr. Meisner’s vacancy. Mr. Larson shared that Ms. Howard may have someone interested.

A motion was made to delay the voting for Chairman and Vice Chairman to the next meeting. The motion was approved 6/0.

7. Public Comment(s) –

Mr. Andy Kinghorn announced that he has been appointed to the BJWSA board. He expressed that he has enjoyed the opportunity and will miss being a part of the board.

Mr. Feinberg made a motion to formally thank Councilperson Howard for her continued support of the Stormwater Board in 2018. The motion was approved 6/0.

Mr. Smith shared a photo of shellfish closures along the SC coastline. He expressed it represents the work that has to be done and the challenges that are there.

Mr. Larson recognized Mr. Lamar Taylor, as he is retiring. Mr. Taylor shared that he will be with the City of Beaufort on a six month contract to help.

Mr. Smith commented that he has enjoyed serving and that is has been a pleasure.

8. Next Meeting Agenda – Approved with Addition.

Addition to Unfinished Business – Voting for Stormwater Management Utility Board Chairman and Vice Chairman

A motion was made to cancel the January meeting. During discussion Mr. Bruggeman asked if there are a minimum number of meetings required. Mr. Larson noted there were a few canceled meetings in 2018 and that he doesn’t see it [canceling the meeting] being an issue. The motion was approved 6/0.

9. Meeting Adjourned
Appendix C was added to document the effectiveness of BMPs in controlling stormwater volume.

The Appendix includes a worksheet that must be completed to determine the "effective imperviousness" of the development. The recommended goal set for new development is 10 percent effective imperviousness.

The former Appendix C (Sediment Control Certification Form for Construction Sites) is now Appendix D.

The former Appendix D (Town of Bluffton Stormwater Ordinance) has been removed because the town no longer has a stand-alone ordinance.

In 2012, modifications to the manual were made to reflect the following:

- Workshop with local engineers on reformatting the manual.
- Update of the Zoning and Design Standards Ordinance (ZDSO) to a new form-based code.
- Consideration of "Step 2" on-lot controls of stormwater runoff from lots in developments that were approved prior to stormwater volume controls.
- Response to comments on draft revised manual (September 2011).

In 2016, modifications to the manual were made to reflect the following: This version of the manual was prepared in 2016. Modifications include the following:

- Update per municipal separate storm sewer system (MS4) permit requirements.
- Reorganize manual for better information flow.
- Update and clarify design requirements.
- Reconcile information with other documents including 2014 Community Development Code updates and a new standalone Stormwater Ordinance.
- Expand BMP Selection and provide Fact Sheets for Construction, Post Construction BMPs, and municipal facility good housekeeping.
- Clarify and provide for Violations and Enforcement policy.
- Clarify and provide for Operations and Maintenance (O&M) procedure.
- Respond to comments generated from public.

This version of the manual was prepared in 2018. Modifications include the following:

- Updating Stormwater Permit forms to reflect changes in County procedures.
- Clarifying Stormwater Permit procedures
- Clarifying the Violations and Enforcement policy
1.2 Contents of the Manual

For the purpose of this manual Administrator(s) shall mean “Administrators” means the County Engineer and Stormwater Manager and other individuals designated by the County Administrator, from time to time, to administer interpret and enforce this Ordinance. Stormwater Manager and Administrator are used interchangeably in the document.

Section 2 presents a summary of County stormwater management regulations. The summary provides a starting point for developing a comprehensive set of policies and standards for development in the County. The County regulations include details on drainage easements, flood control design criteria, general planning and design requirements, retention/detention facilities, open drainage system ditches and ponds, roadway drainage planning and design standards, and storm sewer design standards that were previously in the ZDSO, Division 4 (Stormwater Management Standards).

Section 3 presents regulation of non-stormwater discharges to the storm drainage system to the maximum extent practicable as required by Federal and State laws in order to protect the existing health, safety, and general welfare of the citizens of Beaufort County, South Carolina. This section will establish methods for controlling the introduction of pollutants into the MS4 in order to comply with requirements of the NPDES permit process.

Section 4 provides guidance to ensure all new developments and redevelopments are designed to meet current design requirements. All lot owners shall meet current Federal and State laws. Individual property owners and their contractors must have available the specific erosion control measures to be used for all lots under construction.

Section 5 provides recommended policies and standards for new development and redevelopment. This section includes all information required to determine if a development satisfied both the runoff volume control and water quality control. Also included in this section are the design guidelines for BMPs and worksheets to evaluate BMP sizing. This section also considers appropriate water quality storage volume requirements for BMPs. Computer simulation models, using long-term local rainfall data as input, were applied to determine the optimum storage volumes for Beaufort County BMPs. In all cases, the recommended storage volumes are as restrictive as, or more restrictive than, the State requirements.
Stormwater Manager’s Report for the Stormwater Utility Board Meeting

Utility Update

1. Southern Lowcountry Regional Board (SoLoCo)
   a) Nothing new to report.
   b) See Regionalization below.

2. Regionalization
   a) Regional Stormwater Design Standard and Model Ordinance Project – A baseline assessment of each program has been completed. The consultant has created a questionnaire to be distributed to the engineering and development community. Responses are due by February 15th. If anyone is interested in getting the questions to respond, contact any local stormwater office as soon as possible.
   b) Regionalization of programs – No action. This is pending additional discussion after the Reg. SW Std. is completed.

3. Annual Financial report from the Municipalities – Per the Intergovernmental Agreements for the Utility, each year on September 30th, the City and Towns are required to submit a summary of revenue and expenditures for the previous fiscal year.
   a) Beaufort County – Actuals pending Finance department completion. (March 2019?)
   b) Town of Hilton Head Island – Received.
   c) Town of Bluffton – Received.
   d) Town of Port Royal – No response.
   e) City of Beaufort – Received.

4. Special Presentations – Staff has begun research on the various topics provided by the Board for future meetings:
   a) Military Site’s Stormwater management – Staff has been in frequent communication with both Parris Island and the Naval Hospital. A site visit at PI is tentatively scheduled for February 15th. The staff at the Naval Hospital has expressed concern about allowing access in light of ongoing discussions with the County Attorney’s office on the SWU fees in arrear for the site.
   b) Living shorelines – No action at this time.
   c) Other ideas?

5. New County Council – Eric Larson presented an overview of the Stormwater program to the new County Council members on December 13, 2018. (See attached packet given to
Council members

6. FY 2020 Budget – Staff is working to complete a draft of the FY 2020 budget, due to Administration on February 22, 2019. A Stormwater Management fee budget proposal and a report of TY 2017 billing and collection is due to the SWIC members on February 15th. In addition, the staff is updating the 5 year plan as part of FY 2020 with an anticipating of requesting a change in SWU rate. The budget and any change in fee will be presented at a future Board meeting.

7. Board Appointments
   a) County Council is considering an appointment for the vacant seat for Stormwater District 6.
   b) The City of Beaufort has appointed Neil Desai, City Engineer and Public Works Director, to replace Andy Kinghorn.

Monitoring Update

1. Lab Update (From Dr. Alan Warren and Lab Manager Danielle Mickel)
   i. See attached report. Please note the report on the Bluffton Gateway (Wal-Mart) pond monitoring results, the Okatie West Bold and Gold study, and the Town of Port Royal Cypress Wetland monitoring report.

2. Monitoring Plan updates – The new plan was put into action in January 2019. It was submitted to SC-DHEC as part of the annual MS4 report.

Stormwater Implementation Committee (SWIC) Report

1. The SWIC has not met in the last month.

Stormwater Related Projects

1. Evergreen Regional Pond 319 Grant Project (Design=$89,286, Construction=$590,000. Grant=$229,124) – The County received two proposals on December 10, 2018. Both firms were interviewed in January. Andrews Engineering was selected. See attached action item for County Council consideration. Staff recommends that the SWUB endorse the recommendation to County Council.

2. Okatie West / SC 170 Widening Retrofit (Construction = $993,048, CO#1 Design $8,000, CO#1 &2 Const. $25,739) - Post construction monitoring plan continues. The first round of sampling yielded very good results. The proposal to ECS, the Bold and Gold vendor, for monitoring funding was accepted and the project has begun. (See monitoring report.) Results will be presented in a future meeting.

3. Wallace Road – The County’s revised permit request has been approved. The work is
tentatively scheduled for April, 2019.

4. Administration Building Parking Lot and SCDOT pipe failures – (Liner construction = $131,625; remaining work in-house) – The work to safe load and abandon the unneeded second pipe with “cellular” concrete is complete. Results were acceptable but problems were encountered. Staff will continue to monitor the site for pipe failures and repair them with traditional methods as needed.

5. Easements – Staff is working on numerous easement requests and meets monthly to review status. Several condemnations are still being pursued using outside legal counsel.

6. Complaints – Staff continually works numerous drainage related complaints each month. The SWIMS (Stormwater Information Management Systems) database for project ranking and scheduling is in “beta” testing at this time. We are working out the bugs of the program and developing a written SOP for use.

7. Alljoy subwatershed flooding – Staff continues to work on potential project ideas. Staff has drafted an RFQ to solicit an engineering firm to study the watershed and make recommendations. (See attached scope of work). Disaster Recovery staff has also been working on grant ideas for property acquisition and/or structure elevation. The estimated cost for the engineering study is $250,000 and the grant match could range from $1.6 to $2.4 million. (See attached presentation and County Council agenda summary). Staff is seeking input from the SWUB on support of the project and funding needs prior to releasing the RFQ.

8. Driveway pipes and encroachment permits – County Council was briefed on the change in policy and accepted the report without objection.

9. Sommerset Point Subdivision – Staff attended the annual POA meeting on Saturday, February 9, 2019 to discuss routine ditch maintenance throughout the subdivision. The attached brochure was prepared for the purposes of education for the residents.

Professional Contracts Report

1. CIP FY 18 Grouping Stormwater Projects – (Design - Ward Edwards $202,000, Andrews Engineering $560,490, Const. est. $5,512,900) – All projects are in early design phase.
   a) Salt Creek and Shanklin Road sites continue with full design. No further updates.
   b) Brewer Memorial – The County Council overturned their decision in November and approved the change order for additional design services. The project is back on schedule and the consultant is working on full design.
   c) Sawmill / Forby – All work has stopped on this project and the portion of the scope of work in the consultant contract has been removed.
Regional Coordination

1. Factory Creek Watershed Regional Detention Basin “Phase I” & Academy Park Subdivision (Design Cost $49,873, Tree Mitigation Cost $18,200 & $18,200, Construction Cost by the Developer) – No additional update at this time.

2. Factory Creek Watershed Regional Detention Basin “Phase II” (Design Cost = $63,390, Tree Mitigation Cost is pending, Construction Cost by the Developer) – No additional update at this time.

3. Town of Bluffton and Beaufort County Joint meetings on Sanitary Sewer in the May River watershed – No additional update at this time.

4. Mossy Oaks Task Force – (Design $20,404, Construction $205,000; County portions only). See Municipal Reports.

5. Graves Property / Pepper Hall Public / private partnership – The Development Agreement between the developer and County received final approval in December. Staff has met with one potential development company considering the site and we explained the stormwater requirements and financial relationship with the County for stormwater construction and maintenance. No plans have been submitted for review at this time.

6. Whitehall property purchase – In the fall of 2018, the County Council, via Rural and Critical Lands Board, purchase approx. 10 acres (Parcel A on the attached plat) for a park. The Developer that sold the land retained the rights to place a stormwater pond for the development of Tract B on Tract A. However, there was no written agreement to that affect between the developer and County Council. This legal issue is currently being dealt with by the County Attorney’s and County Administrator’s offices. This update is provided for your information only. To staff’s knowledge, there is no commitment to fund any portion of the design and construction.

7. US 278 “super street” widening on Jenkins Island (Windmill Harbor area) – In December, the County met with SCDOT and discussed this project and others, including the US 278 corridor study for replacement bridges to Hilton Head Island. The Jenkins Island project is within the study area. While the original project is still moving forward, the County Council is reconsidering the scope and timing of the project to avoid any perceived “wasted effort and money” towards what might be a temporary solution for traffic in the area.

8. South Carolina Coastal Communities Stormwater Pond Advisory Committee – Beaufort County staff has been participating in this committee for a few years now. Last month, the committee published a report, “Stormwater Ponds in Coastal South Carolina – 2018 State of Knowledge”. The executive summary is attached.

9. Charleston Area MS4 managers group – Staff attended the quarterly meeting of the Charleston / Berkeley / Dorchester Counties MS4 program managers on February 7,
10. Bluffton Ditch Task Force – Staff met with Town of Bluffton and SCDOT staff on January 23, 2019 as part of an ongoing effort to coordinate stormwater maintenance in the town limits.

Municipal Reports

1. Town of Hilton Head Island (From Jeff Netzinger, Stormwater Manager and Brian Eber, MS4 Coordinator)
   i. See attached report.

2. Town of Bluffton (From Kim Jones, Watershed Management Division Director)
   i. See attached report.
   ii. County Staff did attend the monthly May River WAPAC meeting in January. A presentation on climate change was given by staff from SC SeaGrant.

3. City of Beaufort (From Neil Desai, Asst. Public Works Director)
   i. See attached report. Please note the Mossy Oaks Subdivision project announcement.

4. Town of Port Royal (From Van Willis, Town Manager and Tony Maglione, consultant)
   i. See Monitoring report in reference to the Cypress Wetland monitoring.
   ii. No information was available at the time of this report.

MS4 Report

1. Plan Review – See the attached chart for Beaufort County Stormwater staff plan review workload for the past 12 months.

2. Stormwater Permits – See the attached chart for Beaufort County Stormwater permits issued for the past 12 months.

3. Monthly Inspection summary - See the attached chart for Beaufort County Stormwater staff inspection, complaint, IDDE, and violations summary for the past 12 months.

4. Weather Station data. See attached chart.

5. Public Education – Lowcountry Stormwater Partners (LSP), via Carolina Clear, continues to work on several initiatives towards public education and outreach. See the MS4 Annual report for a detailed report for the past 12 months.

6. “That’s my Truck” naming contest – Staff and equipment visited Mossy Oaks Elementary and Port Royal Elementary on December 17, 2018. Town of Bluffton staff presented their sweeper truck at May River Montessori School. The County Channel Staff produced a
short video of the event and it was shared with the Council in January. You can see the video at [https://www.youtube.com/watch?v=BGvtPFr6qj](https://www.youtube.com/watch?v=BGvtPFr6qj).

7. System Mapping – County staff anticipate being 100% complete with the first round of system mapping in August 2019. In an effort to fully understand the movement of stormwater throughout the County, the County has partnered with the City of Beaufort and the Town of Port Royal to map their jurisdictions as well. We are scheduled to begin mapping in the Town in September 2019 and the City in February 2020. The Towns of Hilton Head Island and Bluffton have their own GIS capabilities and perform their own mapping, sharing that data with the County on a regular basis.

9. MS4 Statewide General permit – No update at this time.

10. Statewide General permit for Construction – No update at this time.

Stormwater Management Department

1. MS4 - regulatory program
   a. Permit NOI, SWMP online
   b. Updated BMP manual, Ordinance online
   c. Updated Monitoring plan
   d. IDDE plan ahead of schedule for Permit year 2
   e. Year 4 = work on Facility plans
   f. Staff 5 inspectors, 1 Asst. SW Mgr. (new hire)

2. Utility Mgt.
   a. Rate Study and Fee Increase in 2015
   b. IGA with each Town and City (not Yemassee or Hardeeville)
   c. Cost Shares - Public Education, Monitoring, Regional Stormwater Design Standard
      i. Regional SW Std. - Contract with the Center for Watershed Protection
      ii. Public Education - Contract with Clemson University Extension Service
   d. Staff consists of 4.4 FTE. (Eric and Patty are split funded) – 1 Mgr. 1 Easement Manager, 1 Admin. Assistant, 1 Business Manager
   e. Utility Revenue $12.3 million; $5.2 million to County.

   a. Expanded LOS and EOS - allows some private drainage work if easements are dedicated.
   b. Crew size approx. 38 staff

4. CIP program - $16.8 mil over 10 years.
   a. Current Projects
      i. Evergreen Regional Pond 319 Grant.
      ii. Rock Springs Creek watershed ponds - Developer partnership - In construction.
      iii. Salt Creek Regional Pond
      iv. Shanklin Road Regional Pond
      v. Brewer Memorial Park BMP Demonstration Project
      vi. Forby / Sawmill Wetland Restoration
      vii. Mossy Oaks Subdivision (partnership with CoB)

5. Ongoing issues
   a. Alljoy Flooding
   b. Partnerships with Towns, City strained - lack of cooperation
   c. Regional Authority?
   d. SW Utility Board make-up
   e. Increase funding

Public Works Department

2. Reorganization into one crew (Operations) under way.
3. Manpower - approx. 141 crew (approx. 44-part time at convenience centers)

CONTINUED
4. Budget - $10.4 million (Excluding Stormwater O&M)

5. Stats.:
   a. Convenience Centers = 11
   b. Boat Ramps = 24
   c. Fleet = approx. 36 pieces heavy equipment and 36 pickups/SUVs. 43 smaller attachments and smaller pieces.

6. Ongoing Issues
   a) Yard waste composting program.
   b) In-house aluminum recycling operation.
   c) Glass recycling program.
   d) Expand litter control efforts.
   e) Evaluate the effectiveness of soil additives to dirt roads.
   f) Boat landing upgrade program
   g) Evaluate alternative fuel options for County fleet and heavy equipment
   h) Fleet Pool; reduce size of fleet through efficiency
   i) Evaluate concepts to improve sustainability while maintaining or reducing expenses

Disaster Recovery Department

1. 2 FTE - Pamela Cobb – Coordinator / Angel Bowers- Assistant Coordinator

2. Disaster Recovery Team is defined by ordinance and is made up of most higher management staff. Activates during an emergency. Larson serves as Team Director. Coordinator manages planning and preparations. Oversees Debris Operations with Public Works Director and Contractors

3. Annual duties
   a. Maintain and update Recovery Plan, DR Ordinance, All Hazard Mitigation Plan, Public Works Response Plan, Debris Management Plan, review Cont. of Service Plans
   b. Grants for Pre-disaster mitigation projects
   c. Training and Exercise planning
   d. Liaison with BC-EMD, SC-EMD, others

4. Current Activity – Hurricane Matthew, Hurricane Irma, Warning Siren Grant Project, and Daufuskie Fire Dept Hardening. Training staff on FEMA documentation. Assisting 58 clients from Hurricane Matthew through the BJLTRG.

Community Development Department

1. Adopted new Zoning code, the Community Development Code, in 2014.
   a. Reorganization to "Community Development" department completed in 2017.

2. Staff - 10 FTE.

3. Functions
   a. Update Comprehensive Plan
   b. Maintain the CDC
   c. Handle weekly SFT submittals, monthly PC submittals
   d. Natural Resources Protection (trees, marsh buffers, etc.)
   e. Passive Park Program
   f. Staff for multiple committees
      i. Rural and Critical
      ii. Northern Area Planning Committee
      iii. Southern Corridor Beautification
      iv. Design Review Board
      v. ZBOA
      vi. SRT

4. Current projects
   a. Comp. Plan update
   b. Passive Park Public Use Work Plan implementation of Tier 1 and 2 properties
   c. Lady’s Island Growth Boundary revision (in conjunction with CoB)
   d. Impact Fee Update

END
Environmental Engineering & Land Management Division
(incl. Stormwater Utility Management, Public Works, Solid Waste and Recycling, Community Development, and Disaster Recovery)

A Report to Beaufort County Council
December 13, 2018

Organizational Structure

- Environmental Engineering & Land Management Division (Eric Larson)
  - Stormwater (Eric Larson)
  - Community Development (Eric Greenway)
  - Public Works (Dave Wilhelm)
    - Solid Waste (Cindy Carter)
  - Disaster Recovery (Pamela Cobb)

Outline

- Introduction to Stormwater
- Design Standards
- MS4 permitting
- Capital Projects
- Future of the Program

Stormwater
What does Stormwater Do?

- Utility Fee Billing and Collections
  - Credit and On-Lot Volume Exemption Programs
- Implement 2018 Master Plan elements
- Stormwater Infrastructure Maintenance
- State and Federal mandated permitting (MS4)
- Capital Projects
- Special Studies
- In-House GIS to support all functions

Current Utility Fees in B.C.
(Rates per single family unit)
- Town of Hilton Head = $150 (typical)
- City of Beaufort = $135 (typical)
- Town of Bluffton = $98
- Town of Port Royal = $60 (typical)
- Beaufort County = $87 (typical)

Other Utility Fees in SC
- City of Charleston = $72
- City of North Myrtle Beach = $72
- Georgetown County = $ 51.60
- City of Columbia = $47.40

S.W. Infrastructure

- Managed under Public Works
  - Operations and Maintenance
  - Limited CIP project work
- Level of Service Plan
  - Defines the services provided
- Extent of Service Plan
  - Defines where we provide the services

The Regulation

- Code of Ordinances
  - Chapter 106 – Community Development Code
  - Division 5.12.30 – Stormwater Stds.
  - B. All these standards are to be achieved in accordance with the latest version of the County’s Manual for Stormwater Best Management and Design Practices (BMP), which is incorporated herein by reference.

The Regulation, cont.

C. All development and redevelopment shall utilize and integrate Stormwater BMPs which are appropriate to their location and environment, and contribute to the overall character of a proposal. BMPs implemented at the development scale shall be integrated ... to the maximum extent technically feasible ... . BMPs may be designed as a singular practice or as part of various supplemental pre-treatment BMPs in series to achieve the runoff volume, runoff pollution load, and peak runoff rate control standards.

BMP Manual Principles

Stormwater Review

Approved Design

Peak Controls

Water Quality Controls

Runoff Volume Controls

and, Impervious Cover Controls
MS4 Permitting

- US EPA’s Clean Water Act
  - Enacted in 1972
  - Amended in 1987
- Point source pollution (1990’s)
- Non-point source pollution
  - Municipal Separate Stormsewer Systems (MS4)
  - Phase 1 – 1999 (100,000+ pop.)
  - Phase 2 – 2003 (50,000+ pop., 1,000 person/sq. mi.)
- 2010 U.S. Census expands urban areas of County
- 2014 SC-DHEC designates Beaufort County, Towns of Hilton Head Island and Bluffton

The MS4 Program Elements

Minimum Control Measures (MCM)
1. Public Education
2. Public Outreach and Involvement
3. Illicit Discharge, Detection, and Elimination (IDDE)
4. Construction Run-Off
6. Good Housekeeping in Municipal Operations

Capital Needs

- We currently have 17 projects identified to:
  - Alleviate road flooding
  - Stormwater runoff volume reduction
  - Pollutant removal
  - Infrastructure rehabilitation
  - Promote growth
- $16.8 million (and growing)

Capital Needs cont.

- The Utility has the following projects under design and / or construction:
  - Factory Creek Phase I
  - Factory Creek Phase II
  - Shanklin Road Regional Pond
  - Salt Creek Regional Pond
  - Sawmill / Forby Wetland Enhancement
  - Brewer Memorial Park
  - Evergreen Regional Pond

Moving Forward

- Maintain MS4 Program Implementation
- Implement the 2018 Beaufort County Stormwater Management Plan
- Regional Standards
- Regional Authority (?)
- Revise SWU Board structure (?)
- Utility Rate increase; Additional bonding
  - Utilize the Credits Program more effectively

Public Works Department (incl. Solid Waste & Recycling)
MISSION STATEMENT

• To maintain and improve the infrastructure of Beaufort County Government to include the road and drainage networks and boat landings, and
• to manage the Solid Waste stream within the County and promote cost-effective recycling, and
• to manage and support beautification efforts, and
• to manage fueling sites to support County and other subscriber vehicle fleets,
in order to enhance the public safety, public health and the efficiency of Beaufort County.

CORE RESPONSIBILITIES

• Maintain and Improve:
  • Stormwater Infrastructure Systems
  • Roads (paved and unpaved)
  • Boat Landings, Piers and Beach Access Points
  • Solid Waste & Recycling Convenience Centers
• Manage 1st Vehicle Services Fleet Contract
• Provide exceptional customer service to the citizens of Beaufort County
• Perform diligent planning efforts to ensure all departments move forward in a logical and fiscally responsible manner
• Complete all required tasks within budget

DIVISIONS

• Stormwater Infrastructure
• Solid Waste and Recycling
• Roads and Drainage (re-org. pending)
• General Support
• Admin (including Fleet Manager and Special Projects Engineer)

STAFF

• Roads and Drainage 22 Full-time
• General Support 8 Full-time
• Stormwater Infrastructure 39 Full-time
• Solid Waste and Recycling 22 Full-time
• Administration 6 Part-time

BUDGET

• The FY19 budget for Public Works is $17,118,748.
The breakdown by section is:

  • Administration $366,745
  • General Support $681,941
  • Roads and Drainage $1,731,693
  • Solid Waste and Recycling $7,657,653
  • Stormwater Infrastructure $6,680,716
CAPITAL NEEDS

- Implementation of curbside collection program including associated impacts on related programs
- Boat landing improvements
- Heavy equipment replacement
- Renovation of existing Public Works Administration building
- Upgrade and renovation of equipment maintenance shop

MOVING FORWARD

- Initiatives planned for 2019 include:
  - Creating a yard waste composting program to reduce costs in an environmentally responsible manner
  - Implement an in-house aluminum recycling operation utilizing existing infrastructure and manpower
  - Begin a glass recycling program, possibly with a private partner
  - Expand litter control efforts including bi-annual regional clean-up days

MOVING FORWARD CONT.

- Initiatives planned for 2019 include:
  - Evaluate the effectiveness of soil additives to potentially improve the surface condition of unpaved roads to reduce maintenance costs
  - Begin a planned boat landing upgrade program
  - Evaluate alternative fuel options for County fleet and heavy equipment
  - Fleet Pool; reduce size of fleet through efficiency
  - Evaluate concepts to improve sustainability while maintaining or reducing expenses

Disaster Recovery

Outline

- Organizational Structure
- Introduction to Disaster Recovery
- Hurricane Matthew
- Hurricane Irma
- Grant Projects
- Plans
- BJLTRG clients

Organizational Structure

- Disaster Recovery Task Force
  - Paul Sommerville, Ex Officio Chair
  - John Weaver, County Administrator
  - Eric Larson, Director Recovery Task Force
  - Deputy Recovery Directors: Dave Wilhelm, Monica Spells, and Chuck Atkinson
- 27 Recovery Functions
- Pamela Cobb – Disaster Recovery Coordinator
- Angel Bowers – Asst. Disaster Recovery Coordinator
What does Disaster Recovery Do?

**Recovery:**
- Recovery Task Force takes lead once county transitions
- Oversees Recovery Efforts after a disaster
- Coordination between FEMA and State partners after a disaster
- Assist with PW for reimbursement

**Plans**
- Disaster Recovery Ordinance
- Disaster Recovery Plan
- Debris Management Plan
- Public Works Response Plan
- Hazard Mitigation Plan
- County Continuity of Service Plans

---

**Hurricane Matthew 10/7/16**

- Hurricane Matthew (PA)
  - 15 projects = Total Cost $37,329,764.39
- **Total Cost for Debris Operations:** $35,389,214.57
  - Regular Debris: $17,208,865.50
  - Marine Debris: $6,621,919.03
  - PPDR: $11,558,430.04

---

**Hurricane Irma 9/11/17**

Awarded only Public Assistance (No SBA or IA)

- 278 East Bound – in Appeal’s process
- Emergency Work – pending payment
- Donated Resources: $20k – review process
- Boat Landings – pending payment
- Facilities – pending payment
- Debris Removal – Final review
Grant projects

- Warning Siren Project – (12/13 locations) - (awarded)
- Daufuskie Fire Dept Hardening (Awarded)
- Lady’s Island Airport generator - pending
- Buckwalter generator - pending
- Patrick Edgerton elevation project

BJLTRG

- Originally 198 (BFT) 55 (Jasper) applied to Palmetto/ DRO program
- Currently remain 58 clients from Hurricane Matthew
  - Beaufort (45) Jasper (13)
- 6 homes have been completed through SC 1 FUND

How We Prioritize Applicants in the NMID Counties?

- Lowest Income (taxable or nontaxable)
- Multiple Disability Household
- Age Dependent
- Disabled
- Date of paperwork completion

Community Development Department

(Formerly Planning & Zoning)

Community Development Department (CDD)

- Functions
  - Update Comprehensive Plan
  - Maintain the CDC
  - Handle weekly SFT submittals, monthly PC submittals
  - Natural Resources Protection (trees, marsh buffers, etc.)
  - Passive Park Program

Community Development Department (CDD)

- Staff for multiple committees
  - Rural and Critical
  - Northern Area Planning Committee
  - Southern Corridor Beautification
  - Design Review Board
  - ZBOA
  - SRT
Community Development Department (CDD)

Current / Future Projects:

- CDD is finishing up the Lady’s Island Plan update and will be working with the Steering Committee and City of Beaufort to proceed through Council for adoption.
- Community Facilities and Transportation elements to the Comprehensive Plan will be updated and sent through the Planning Commission, NRC, and Council recommendation/adoption process.
- CDD will continue to coordinate the impact fee update and development of the school impact fee between the consultant Tischler Bise, the Beaufort County School District, and appropriate County Departments.

Community Development Department (CDD)

Current / Future Projects:

- Many Passive Park development items will be coordinated and processed:
  - Mobley tract civil drawings to begin
  - Crystal Lake trail plan to be bid for construction
  - Fort Fremont interpretive center construction should break ground
  - Widgeon Point park amenities planning to be completed

Crystal Lake: Fish Consumption

- **Project Description:** Beaufort County wishes to determine whether Crystal Lake should be deemed “catch and release” or be unrestricted in terms of the consumption of legally-caught fish regardless of species. At present, very little is known about the number and species of fish in Crystal Lake, let alone how many fish are caught and consumed. Thus, the proposed work detailed herein assumes that edible fish can be caught in sufficient numbers for tissue analysis. Once such analysis has been conducted, tissue contaminant levels can be compared to risk-based values to determine whether consumption should be restricted. As such, the project consists of the five components listed below. A proposed budget follows, broken down into component parts.

1. Collection of a minimum of three individual fish of up to three edible species with a cast net, set net, trotline and/or rod and reel.
2. Processing fish for analysis by scaling, filleting, wrapping, bagging and freezing.
3. Submission of fish tissue to TestAmerica Laboratories, Inc. for the analysis of metals, including mercury, polycyclic aromatic hydrocarbons (PAHs), pesticides and polychlorinated biphenyls (PCBs).
4. Comparison of tissue contaminant concentrations to U.S. EPA risk-based consumption limits and/or U.S. FDA action levels.
5. Delivery of comparative analysis to Beaufort County to support a risk management decision on consumption of fish from Crystal Lake.

**Proposed Budget:**

1. Fish collection: 2 fishermen x 8 hr/day x 2.5 days x $45/hr/fisherman = $1800
2. Fish processing (scaling, filleting, wrapping, bagging, freezing): 4 hr x 45/hr = $180
3. Shipping cost and dry ice: $200
4. Analysis by TestAmerica Laboratories, Inc.: $597.50 per sample x 9 samples = $5377.50 (see quote attached)
5. Comparative analysis of tissue contaminant data with risk-based consumption limits and/or action levels: $2000

**Total:** $9557.50
Okatie West Pond: Bold and Gold

- **Project Description:** Environmental Conservation Solutions, LLC, in conjunction with Beaufort County, installed an innovative bacteria and nutrient removing side-bank filter to a section of a newly constructed wet detention pond for the Okatie West Regional Stormwater Project. The purpose of the joint effort is to evaluate the efficiency of the Bold & Gold Side-Bank filter for the possible application in the county to achieve target stormwater treatment in existing and new stormwater BMPs. The pilot project is a 60-foot side bank filter with a 2-foot layer of Bold & Gold® CTS Filtration media as the treatment mechanism, overlaid by a 6-inch well-draining soil that is connected to an underdrain pipe. The filter is located on the south side of the wet detention pond.

- **Status:** USCB is waiting on pump materials to arrive from Environmental Conservation Solutions, LLC. See proposal below:

---

**UNIVERSITY OF SOUTH CAROLINA BEAUFORT**

Date: January 24, 2019

To: Antony Rios, E.I, Environmental Conservation Solutions, LLC and Eric Larson, P.E., Beaufort County, SC Government

From: D. Alan Warren, M.P.H., Ph.D.

Subject: Function of Bold & Gold Side-Bank Filter at Okatie West BMP

This letter represents a response to your request for a proposal to measure the ability of Bold & Gold filtration media to remove contaminants of concern from stormwater detained in the pond known as Okatie West. We propose to collect and analyze sediment overlying the bank filter on one occasion, while collecting and analyzing water on four occasions, each separated by a minimum of 3 weeks, but no more than 1 month. Water samples will be taken in two locations – one from an area of the pond overlying the bank filter and another from the pipe containing filtered water. The underdrain holding filtered water will be pumped dry and allowed a minimum of 5 hours to refill prior to sample collection. The results of each sampling event will be relayed electronically as data become available, as will the elevation of pond water relative to the weir at the time of
sampling. In addition, a final report of the entire project will be submitted once analytical results from the fourth sampling event are received. Whenever possible, methods certified by the State of South Carolina will be used for sample collection and quantification of analytes/parameters.

The project will be undertaken by three employees of the University of South Carolina Beaufort – Alan Warren, Danielle Mickel, and Hamp Simkins. Together, these employees run the University’s Water Quality Laboratory. It is estimated that the project will involve four site visits by two employees, each lasting about 10 hours when travel time is included. The cost for the field collection component of the project is estimated below, followed by analytical costs. When taken together, the overall cost of the project is estimated at $6518.72.

**Sample Collection**
Personnel: 2 persons x 10 hours x $45/hour x 4 sampling events = $3600
Travel: 46 miles roundtrip x 4 sampling events = 184 miles x $0.58/mile = $106.72
Subtotal: $3706.72

**Ex-situ Water Parameters**
- E. Coli ($60)
- Fecal Coliform ($60)
- Total Suspended Solids ($20)
- Copper and Zinc ($24)
- Total Kjeldahl Nitrogen ($35)
- Nitrates/Nitrites ($18)
- Total Phosphorus ($25)
- Orthophosphate ($30)
Subtotal: $272 per sampling event x 4 events x 2 locations = $2176

**In-situ Water Parameters**
- Dissolved Oxygen
- Turbidity
- Specific Conductivity
- Salinity
- pH
- Temperature
Subtotal: $46 per sampling event x 4 events x 2 locations = $368

**Soil Parameters**
- Percent Moisture ($10)
Total Organic Carbon ($150)
Total Kjeldahl Nitrogen ($35)
Nitrates/Nitrites ($18)
Total Phosphorus ($25)
Orthophosphate ($30)

Subtotal: $268 per sampling event x 1 event = $268

**Okatie West Pond:**

- Post BMP construction site visit occurred on 2/1/19 with BC and USCB.
- Post BMP construction sample collection began on 2/1/19 and continue every M, W, F for a total of 11 samples to mirror the schedule of the Pre BMP sample collection.

**Walmart Pond 278:**

- Sample collection and analysis has ended. See report below:
Fecal Coliform Removal Efficiency of Walmart Detention Pond Located in Bluffton, SC
Sampling Locations

WMPIn: N32.257084 -80.855553
Sampling point for water originating from Walmart and Sam’s Club parking lots

WMPOut: N32.260125 -80.857240
Sampling point for water exiting wet detention pond into vegetated wetland

WMPWet: N32.258872 -80.867015
Sampling point for water flowing northward toward Highway 278 that does not enter the wet detention pond

WMP278: N32.261867 -80.854971
Sampling point adjacent to Highway 278 consisting of water discharged from wet detention pond combined with that which never entered

*CFU/100 mL = colony forming units per 100 mL of sampled water
In 2018, personnel from Beaufort County’s Stormwater Department and the University of South Carolina Beaufort’s Water Quality Lab collected and analyzed water for fecal coliform bacteria at four locations at or adjacent to a recently-constructed Walmart Supercenter and Sam’s Club. The effort spanned 5 months and consisted of ten separate sampling events, the purpose of which was to estimate the efficiency with which Walmart’s wet detention pond reduced fecal coliform concentrations in water largely originating from impervious parking surfaces. On 9 of 10 sampling occasions, the bacterial concentration was reduced by > 90%, with an average for all sampling events a remarkable 95.4%. This percent decrease was arrived at by simply comparing bacterial concentrations in water entering the wet detention pond (WMPIn) to those in water exiting the pond (WMPOut) on the same day. As the duration of water detention is unknown, such a comparison of bacterial concentrations on any given day is potentially misleading. Rather, the focus should be on the consistency with which substantial reductions were measured over the entire project period. It is noteworthy that a considerable amount of water that ultimately flows under Highway 278 toward the Colleton River never enters the detention pond. As might be expected, this water contains a considerably higher concentration of fecal coliform bacteria (see WMPWet) than does that exiting the BMP. Lastly, the sampling point known as WMP278 is located so as to receive both water that exits the detention pond and altogether bypasses it. Clearly, water at this location is elevated in fecal coliform bacteria relative to that at WMPOut, but is well below that sampled “upstream” at WMPWet. This may be due to the dilutional effect of BMP-treated water on water of higher bacterial content flowing northward. Based on the data presented herein, the Walmart detention pond appears to be extremely effective at removing fecal coliform bacteria from impervious runoff, ultimately reducing the amount of bacteria entering waterbodies to the north.
Port Royal Cypress Wetland:

Port Royal Redevelopment:

- Continue sampling quarterly wet events.

BC Monitoring Plan 2019:

- Sample collection and analysis has begun for new monitoring plan.

**Town of Bluffton**

Monitoring Plan:

- Accepting samples to analyze for fecal coliform at same time as MST analysis.
• Continue with weekly sample analysis.

• Accepting samples for new project: EPA 319 Grant Town Hall Pervious Paving Parking Lot. Wet event samples but as often as possible before construction begins.

• Additional bi-monthly nutrient (T-N, T-P) parameter analysis for NRP-pond site.

• USCB Lab continues to collect and share data with TOB for the shared BC MS4 sites.

Town of Hilton Head

Jarvis Creek Project:

• Project Description: Jarvis Creek pump station will be undergoing a modernization upgrade sometime in February of 2019. The purpose of water quality sampling is to analyze the impacts downstream of the pump station upgrade.

• Status: Jarvis Creek Park water quality sampling pre-pump upgrade has ended and will begin after upgrade project has finished.

USCB Laboratory

Additional Projects:

• Palmetto Bluff: Continued sampling efforts of 12x/year for 6 wet/6 dry events.

• Water Oak Utility: Continue accepting weekly samples for E.coli from their pump station.

• GEL Engineering: Continue accepting samples for Hilton Head collected by GEL Engineering 4x/ quarter.

Lab Projects:

• Proficiency testing for 2019 has begun. Must be completed within the year for all certified analysis to upkeep lab certification.

• Upkeep of equipment.
• Launch of new laboratory information system to include sample ID, sites, clients, field data, lab results, QA/QC requirements, reporting, etc.

• Continue laboratory certification upkeep as per state requirements.

• Continue cost tracking and invoicing of all projects.

### Issues for Consideration:

Andrews Engineering (AE) and Ward Edwards Engineering (WEE) bid on the Request for Qualifications (RFQ) for engineering consulting services to design the Evergreen Regional Pond 319 Grant project. Both contractors are capable of fulfilling the requirements of the RFQ. The total estimated project time line from AE is 22 months; the WEE estimate is 31 months.

### Points to Consider:

AE walked the property, noted potential wetland delineation changes from the RFQ, were confident their time line could be met and suggested an improved pond design to meet Best Management Practices. WEE followed the conservative time line from the 319 Grant submission, did not re-evaluate the property and did not suggest alternatives to the Grant.

### Funding & Liability Factors:

Design fee of $89,285.55 will come from the Stormwater Utility CIP fund. The Construction cost is funded by $229,124 federal grant and $460,876 from the Stormwater Utility CIP fund.

### Council Options:

Award the contract to Andrews Engineering, award the contract to Ward Edwards Engineering, return the project for rebid or cancel/delay the project.

### Recommendation:

Award the Evergreen Regional Pond design contract to Andrews Engineering in the amount of $89,285.55.
TO: Councilman Alice Howard, Chairman, Natural Resources Committee

FROM: Dave Thomas, Purchasing Director

SUBJ: RFP # 121018 Request for Qualifications to Provide Engineering and Consulting Services for the 2018 Evergreen Regional Stormwater Pond, a CWA Section 319 grant project

DATE: January 28, 2019

BACKGROUND: Beaufort County Purchasing Department issued a Request for Proposal (RFP) for engineering and consulting services for the 2018 Evergreen Regional Stormwater Pond BMP, a CWA Section 319 grant project. The proposal requested that the vendor consultant provide services to design and oversee construction of a regional stormwater best management practice. The Evaluation Committee consisted of six (6) staff members representing the County: Eric Larson - Stormwater Management; Eric Greenway – Community Development; Danny Polk – Stormwater Management; Katie Herrera – Stormwater Management; Thomas Keaveny – Legal, and Keith Hall – Stormwater Management Contractor. Beaufort County received two (2) responses to the RFP. They reviewed and evaluated the RFPs and decided to interview both vendors listed below; Andrews Engineering was selected and ranked the number one (1) firm. The final ranking is as follows:

1. Andrews Engineering, Beaufort, SC
2. Ward Edwards Engineering, Bluffton, SC

During the February 18, 2019 Stormwater Management Utility Board Meeting, the board voted unanimously to recommend the contract to Andrews Engineering for the $89,285.55 scope of services.

The term of the contract will be effective February 28, 2019 to December 31, 2020, approximately 22 months (less than the term of the grant contract with DHEC). Contract fees for the project were negotiated with Andrews Engineering, with the results attached to this recommendation.

FUNDING: Primary Funding - $89,285.55 will come from the Stormwater Utility CIP fund. The Construction cost is funded by $229,124 federal grant and $460,876 from the Stormwater Utility CIP fund

PROPOSED COST: $89,285.55

FOR ACTION: Natural Resources Committee Meeting February 18, 2019.

RECOMMENDATION: The Purchasing Department recommends that the Natural Resources Committee approve the contract award of $89,285.55 to Andrews Engineering for Engineering and Consulting Services for the 2018 Evergreen Regional Stormwater Pond BMP, a CWA Section 319 grant project.

SECTION I

PREFACE

Beaufort County desires to construct a County stormwater best management practice, specifically a stormwater management system for a residential area. This work will be accomplished by the use of a Consultant to prepare the design, secure permitting, oversee construction administration, and generate grant documentation related to the Federal Emergency Management Agency (FEMA) Flood Mitigation Assistance Grant Program.

The Scope of Work, described in more detail below, includes design and construction oversight of a County stormwater management project (aka Best Management Practice, or BMP), grant administration, and public education. In addition to the foregoing, the consulting firm or firms will perform other duties related to stormwater activities outlined in the SCOPE OF SERVICES.

SECTION II

INTENT AND SCOPE OF SERVICES

INTENT

Beaufort County seeks qualifications and proposals from consultants to provide various surveying and stormwater management engineering services related to this project. These services shall be provided under a service contract. The service contract shall not guarantee the successful consultant of a specified dollar value of work or limit the County’s right to seek proposals and award other stormwater services to consultants other than the one selected for this services contract. The County reserves the right to make multiple awards from this solicitation for the services contemplated in this proposal.

PURPOSE

Beaufort County has identified stormwater runoff and drainage issues in a residential area in an unincorporated area of Beaufort County. The Consultant will provide an analysis and report to identify the runoff and drainage issues within the residential area and recommend improvements. This project includes providing design, permitting services and construction oversight for approved improvements. Tasks within the scope of services include, as necessary, wetland delineation, geotechnical investigations, hydraulic and hydrology design, stormwater BMP design, and roadway design.
The County is also considering property acquisition and/or structure elevations through a FEMA Flood Mitigation Assistance Grant to acquire the lands needed for the project and/or to eliminate repetitive losses.

**SCOPe OF SERVICES**

**Task 1: Wetland Delineation**

The Consultant will conduct a jurisdictional stream and wetland delineation within the project area in accordance with the standards currently employed by the USACE (aka Atlantic and Gulf Coastal Plain Regional Supplement to the Corps of Engineers Wetland Delineation Manual). The aquatic feature boundaries will be sequentially flagged or pin-flagged. Wetland and stream flagging will be located and platted by a professional land surveyor. The wetland boundaries and appropriate documentation will be submitted to the USACE so that a final jurisdictional determination can be issued for the project area. This documentation will include information such as the Jurisdictional Determination Request, location, USGS topographic, soils, and NWI maps, infrared aerial photography, and wetland and upland data forms. If the USACE requests a site visit to verify the aquatic feature limits, their personnel will be accompanied in the field by contractor personnel during the site inspection.

**Task 2: Geotechnical Investigations**

The Consultant shall perform geotechnical investigations and design necessary to provide the recommended design for approved improvements. Geotechnical investigations and analysis shall be performed in accordance with the AASHTO LRFD Design Specifications. Analysis and recommendations shall be presented in a report which shall contain:

- Site description,
- Field testing procedures,
- Test location plan,
- CPT sounding and soil test boring logs which describe site soils and illustrate stratification changes, field data, and groundwater levels at the time of exploration
- Laboratory testing results,
- Site preparation procedures including any necessary stripping, undercutting, and stabilization measures, and,
- Foundation recommendations for the culverts.

**Task 3: Hydrology and Hydraulic Design Services**

The Consultant will complete an initial hydraulic and hydrologic model and report for the recommended improvements, and a final hydraulic and hydrologic model and report for the completed project.
The Consultant will perform roadway drainage design as necessary and will follow all guidelines for roadway surface drainage and sediment and erosion control. The impacts to the existing hydrology due to the proposed project will be evaluated. Based on this evaluation, design alternatives to control flooding and manage the runoff associated with the project will be examined. Designs will be performed for roadside ditches, storm sewer systems, cross line culverts, ponds, energy dissipaters and other structures as necessary.

All hydrologic and hydraulic design and studies will comply with the following design criteria:

- SCDOT's Requirements for Hydraulic Design Studies, latest edition;
- SCDOT Standard Drawings, latest edition;
- The Environmental Protection Agency's (EPA) National Pollution Discharge Elimination System (NPDES) as administered under general permit by the SC Department of Health and Environmental Control (DHEC);
- FEMA Regulations, 44CFR Chapter 1;
- South Carolina State Water Law;
- AASHTO "Highway Drainage Guidelines" dated 2007;
- "SCDOT Stormwater Quality Design Manual" dated June 2014;
- SCDOT Supplemental Specifications;

**Task 4: Pumping Stations**

Plans for pumping stations shall be prepared in compliance with the standards listed below as appropriate. Pumping stations are recommended only where no other practicable alternative is available.

Pump stations shall be designed for 25-year storm events. The drainage system shall be checked for the 100-year storm event to determine the extent of flooding and associated risk. The effects of smaller storm events shall be reviewed. Design changes may be considered by the County when deemed appropriate by the Contractor.
Pump stations shall be wet-pit design. A minimum of two pumps shall be installed. Pumps shall be submersible, and individual pumps shall be sized for the storm event design outflow.

Security fencing, road access with parking space, outside lighting and outside operating alarms shall be provided for pump stations. Pump stations shall have telemetry. Provisions for emergency operation shall be provided. When needed, on site fuel storage shall be aboveground and sized for 24 hours of operation.

**Task 5: Structural Design**

Plans for box culverts, headwalls, retaining walls and similar constructions shall be prepared in conformance with the current practice of the County. Standard drawings of the SCDOT shall be used where feasible and will be furnished by SCDOT to be modified by the County to fit the specific needs of the project. Culverts shall be designed for a live load as described in the AASHTO’s LRFD specifications. The box culvert plans shall include the general drawing showing a plan and elevation view with appropriate and proposed information, culvert barrel details, and wing wall details.

Design standards will be in compliance with the following:
- The SCOOT Bridge Design Manual, 2006
- SCDOT Bridge Drawings and Details, latest versions
- AASHTO Guide Specifications for LRFD Seismic Bridge Design
- ANSI/AASHTO/AWS DI.S Bridge Welding Code, latest edition
- Standard Special Provisions and Supplemental Specifications used by the COUNTY/SCDOT

**ADDITIONAL SERVICES**

Development of the project from completion of preliminary design to construction will require additional services. The need for these additional services will be determined based upon the recommended improvements at the project site. These additional services may include, but are not limited to, the following:

- Right of Way Plan Development
- Right of Way Acquisition
- Plot Acquisition
- Construction Specifications & Bid Document Preparation
Utility Coordination
Subsurface Utility Engineering
Wetland Mitigation Permitting
Construction Engineering & Inspection
FEMA Letter of Map Revision (LOMR)
Roadway Design

For roadway design, all plans, designs, specifications and estimates shall conform to
the SCDOT standard practices for highway construction. Roadway plans will be
developed by the Consultant to illustrate roadway alignments, lane configurations,
grades, cross sections, construction limits, relevant dimensions, preliminary
drainage, and location of existing features and proposed improvements as
necessary.

The following is a detailed Scope of Work needed to design and construct a County
stormwater best management practice in addition to managing the grant contract
requirements for the FEMA Flood Mitigation Assistance grant awarded to the project.
A summary of the Scope of Work is as follows:

- Provide expertise in managing FEMA Flood Mitigation Assistance Grant
  Program documentation including other tasks typically required by a grant.
The Consultant will be advising and assisting the County related to grant
  administration.
- Prepare needed field survey necessary for design of approved improvement
  projects.
- Prepare needed wetland delineations required by USACE as part of the
  project.
- Prepare a hydrologic and hydraulic design for approved improvement projects.
- Model pollutant removal and volume control expected for the project to assure
  they meet the intent of previous watershed plans and the grant goals.
- Geotechnical investigations, as needed.
- Prepare a final design(s) for construction documents.
- Prepare, submit, and manage all needed permits from the USACE, SC-
  DHEC/OCRM, and the County’s Zoning department.
- Prepare bid package(s) for construction.
- Oversee the bidding process, evaluating and recommending a successful
  Contractor.
- Provide construction oversight, periodic inspections, and manage
  documentation during construction.
- Provide weekly required CEPSCI certified EPSC inspections for DHEC NOI.
- As-built surveys as required for permits and Grant conditions.
- Prepare public educational outreach materials for various focus groups
  including residents and the engineering/development community for posting
  on the County website, and any other materials and activities if required by
  Grant conditions.
• Other items needed to complete the goal yet not specifically listed above will also be the responsibility of the Consultant and will be outlined during the contract negotiation phase.

Alljoy Home Elevations & Acquisitions

- Identified as a Special Flood Hazard Area (SFHA) by FEMA
  - Defined as the area that will be inundated by the flood event having a 1-percent chance of being equaled or exceeded in any given year
  - Also known as the base flood or 100-year flood
- Potential Grant
  - One resident has already submitted a grant proposal
  - 14 homes identified as Elevation Projects
  - 27 homes and 4 lots identified as Acquisition Projects

Flood Zone A08

Alljoy Home Elevations & Acquisitions

- Elevation Estimated Cost = $6,530,180
  - Local Match: $2,432,395
  - Estimated cost based on grant proposal that was submitted in 2017
- Acquisition Estimated Cost = $1,112,100
  - Local Match: $778,025
- Alternate Project Acquisition in lieu of Elevation
  - Estimated Cost: $3,221,300
  - Local Match: $645,650
**Ditch Maintenance**

The primary duty of the Stormwater Infrastructure team is to maintain the County’s ditches and pipes so that they function as designed.

Over time, ditches fill with sediment or erode. This reduces their ability to drain water effectively. The County’s work returns these ditches to their original depth, size, and shape. This restores their function. After re-shaping the ditch, County crews re-seed the area and stabilize the soil with matting or straw. This minimizes erosion until the grass is re-established. Sod is not provided by County.

**Pros and Cons of Open Ditch Systems**

Open ditch systems have many benefits, such as:

- Greater drainage than a pipe system
- Better water quality
- Flowing ditches reduce health and mosquito issues

Open ditch systems have occasional problems, including:

- Sediment buildup and/or erosion
- Blockages by leaves and debris
- Visible standing water

Mosquito Control can assist homeowners with mosquito control concerns. Call (843)-255-5800 for more information.

**Common Questions**

**Q: Who is responsible for maintaining ditches on my property?**

**A:** The property owner is responsible for maintaining their lot so that it drains to a County maintained ditch or drain. All County maintained ditches carry “public” water (runoff from public roadways). Most ditches in-between or behind houses do not carry “public” water. These ditches are considered private. The property owner is responsible for maintaining private ditches, not the County. If you do not know if your ditch is private or not, call Beaufort County at (843)-255-2805.

**Q: Why can’t I replace the ditch with a pipe?**

**A:** An open ditch will carry more water than a pipe. The vegetation in ditches also filters pollution and creates better water quality. Citizens may be allowed to pipe ditches greater than three feet deep if they obtain a permit from the County, hire a contractor, and pay for the installation costs.

**Q: Why can’t the County pipe the deeper ditches?**

**A:** Piping ditches is very expensive. The cost to pipe the front of a typical residential lot is about $5,000. The County currently maintains 2,709 miles of open ditches and 244 miles of pipe. This makes this practice cost prohibitive.

**Roadside Ditch Maintenance**

Department of Public Works
Stormwater Infrastructure
843-255-2802
www.bcgov.net
The Purpose of Ditches

Roadside ditches move stormwater runoff off roads and keep them passable. Vegetation in ditches can trap pollution carried by stormwater and stop it from reaching local creeks and rivers. The primary duty of the Stormwater Infrastructure team is to maintain the County’s ditches and pipes so that they function as designed. This helps the County meet water quality standards required by State and Federal agencies.

Routine maintenance of these ditches reduces erosion and the flow of sediment into waterways. Roadside ditches are located within the County’s right-of-way. This typically extends into your front yard.

Why We Don’t Pipe Shallow Ditches

To be considered for piping, a ditch must be at least three feet deep. The reason for this is because a 15-inch interior diameter pipe is the smallest size that the County uses for stormwater drainage. To protect the pipe from vehicles that may park over it, additional cover material is needed. There is no way to protect a pipe that size in a ditch less than three feet deep.

Step 1: Locate the Problem

Stormwater Infrastructure staff assesses the problem described by homeowners. If routine maintenance can solve the problem, a work order is set up. If the issue is more complex, a stormwater engineering plan may be required. This step may take several days to several months to complete. It depends on the type of issue and if any budgetary issues arise.

Step 2: Perform the Work

Stormwater crews contact utility companies to mark all underground lines in the work area. Crews remove sediment and vegetation to match the size, shape, and depth required to effectively drain stormwater. This is done using excavators and/or hand tools, depending on the amount of sediment.

Step 3: End Result

Restoration of the ditch is complete when reseeding is done. The County will not sod ditches, so it may take time for the grass to grow back. Once the grass grows, it is important to mow high vegetation and keep debris and leaves from accumulating in the ditch. Blockages of ditches and culverts are frequent causes of flooding in neighborhoods.

Beaufort County Connect
STORMWATER PONDS IN COASTAL SOUTH CAROLINA

2018 State of Knowledge Report
Executive Summary
The S.C. Sea Grant Consortium established the South Carolina Stormwater Ponds Research and Management Collaborative in 2014 to address the pressures on the state’s communities, infrastructure, and natural and human resources from the increasing use of ponds for stormwater management. Stormwater ponds, especially detention ponds, are by far the most common best management practice (BMP) for controlling stormwater runoff from developed landscapes in coastal South Carolina.

The Collaborative engages technical and management expertise from throughout the state to (1) develop an integrated, sustainable, economic and natural resource strategy for the construction, use, and maintenance of stormwater ponds serving existing and future South Carolina communities; (2) satisfy the information needs and concerns of existing local communities, homeowners associations (HOAs), businesses, and industries surrounding stormwater pond design, ecology, efficiency, effectiveness, and management; (3) characterize coastal stormwater ponds to understand their functionality, durability, benefits, and costs; and (4) ultimately develop new and innovative engineering and construction practices to ensure that current and future stormwater ponds function without concerns about possible ecological impacts or additional economic costs associated with their management and maintenance.

For more information or to receive a copy of the full State of Knowledge report when it is available, please contact Hamed Majidzadeh, Ph.D. at (843) 953-6406 or email hamed.majidzadeh@sceagrant.org.

**M. Richard “Rick” DeVoe**  
Executive Director, S.C. Sea Grant Consortium, Charleston, S.C.
The state of South Carolina (S.C.) has seen some of the most rapid coastal population growth rates and overall rates of urbanization in the nation. Its upward trend in population growth is expected to continue with a projected population in the coastal zone of over 1.5 million by the year 2030. The resulting urban and suburban growth in the region increases the amount of impervious surfaces (e.g., roofs, roads, parking lots) to support the associated development. As impervious surface area in a watershed increases so does the amount of stormwater runoff. In coastal S.C., the most common best management practice (BMP) to control runoff is stormwater ponds (herein, “ponds”).

Through working with our stakeholders, the S.C. Sea Grant Consortium (Consortium) identified ponds as a growing topic of concern throughout our eight coastal counties (Fig. ES.1). In October 2014, the Consortium initiated the Stormwater Ponds Research and Management Collaborative, an effort that gathered scientists and resource managers to investigate and address the challenges associated with these systems. The long-term vision of the Collaborative is to develop integrated, sustainable strategies for the construction and use of ponds.

**Figure ES.1** South Carolina’s eight coastal counties with the three coastal regions designated as follows: (1) Grand Strand (Horry and Georgetown), (2) Tri-County (Berkeley, Charleston, and Dorchester), and (3) Lowcountry (Colleton, Beaufort, and Jasper).
tailored to the specific climate, hydrology, geography, and cultural needs of the coast.

What follows is a scientific state-of-knowledge report on ponds in coastal South Carolina. This effort consists of an inventory of existing ponds, a comprehensive literature review, gap analysis, and recommendations for outreach. Twenty-two researchers from six state institutions were involved in the project, which was funded by the State of South Carolina and National Sea Grant College Program from 2014 to 2016.

Each project team worked to ensure that any information on ponds from coastal S.C. was included in the report. When coast-specific or S.C.-specific data were lacking on a given topic, studies from other regions or states were incorporated, as appropriate.

To satisfy the informational needs of our diverse stakeholder groups, we produced a series of products to convey the information gathered by our project teams. This technical report was written for the following audiences: researchers, the stormwater management community, and local and state decision-makers. To share this report with non-technical groups, specifically individual property owners and homeowners associations (HOAs), the Consortium created a pamphlet and booklet series written for general audiences.

A goal of the Consortium is to ensure that science works for S.C.’s coastal communities. We believe that cultivating a science-based understanding of the engineered purpose and current conditions of our coastal ponds among diverse groups of stakeholders is vital for facilitating future collaborations. Ultimately, these partnerships will produce new and innovative practices to ensure effective, long-term stormwater management along our coast. Finally, our vision for this ongoing effort is to have cleaner, healthier, and more economically viable coastal ecosystems.

### The topics covered in the report include:

- **Inventory** and classification of stormwater ponds, as of 2013, in the coastal counties.
- **Transport** of stormwater over surfaces and the function of ponds to retain runoff.
- Nature of **pollutants** in stormwater and the storage ability of ponds.
- **Ecological function** of stormwater ponds within the coastal landscape.
- **Policy and regulatory** lens of coastal stormwater management.
- **Economic** assessment of stormwater management.
- Development of a **communications strategy** towards improved stormwater pond awareness and maintenance.
REPORT HIGHLIGHTS

Pond Landscape (Chapter 1)

Erik M. Smith\textsuperscript{1,2}, Denise M. Sanger\textsuperscript{3,4}, Andrew Tweel\textsuperscript{3}, Erin Koch\textsuperscript{3}

**NUMBER:** Based on 2013 aerial imagery, there are 21,594 ponds in the coastal zone associated with either rural or development-related land uses (Fig. ES.2).

**SIZE:** The median size of all ponds is 0.47 acres, while development-related ponds are 0.54 acres. The vast majority (98 percent) of all ponds are less than 10 acres. However, because of this extreme skewness the combined area of large ponds is 32 percent of cumulative pond area.

**LAND-USE:** Developed ponds, those associated with golf, residential, or commercial development constitute 43 percent of total ponds inventoried.

**PROXIMITY:** The majority of all ponds are within one mile of major downstream receiving water bodies.

**DISTRIBUTION:** Horry, Charleston, and Beaufort counties have the greatest number of stormwater ponds: 64 percent of total.

**COVERAGE:** Total area covered by ponds in the Grand Strand and Charleston County has increased by 4 percent per year (1994 to 2013); more rapidly than overall development (Fig. ES.3)

4 ACE Basin National Estuarine Research Reserve
Stormwater runoff is a major problem associated with increased development. Impervious surfaces prevent rainfall from being observed naturally, causing up to a 45 percent increase in surface runoff (Fig. ES.4). As stormwater flows over the ground it acquires and transports pollutants. Because stormwater is not treated, what flows into storm drains later ends up in receiving waterbodies, becoming the leading cause of poor water quality.

HYDROLOGY: Water flow in coastal S.C. is strongly influenced by the flat topography, shallow water table, and especially for the Lowcountry region, tidal exchange.

BEST MANAGEMENT PRACTICES (BMPs): Wet detention ponds that maintain a permanent pool of water are the most common stormwater BMP in coastal S.C.

POLLUTANT REMOVAL: Chemicals and pathogens in the environment that become adsorbed or attached to particles are stored by ponds via sedimentation; pollutants may be

---

1 Department of Geology and Environmental Geosciences, College of Charleston, Charleston, S.C.
removed by biological processes. According to the International BMP Database, median pollutant removal rates for wet ponds range from 17 to 96 percent, depending on the pollutant type.

**PARTICLES:** The physical and chemical characteristics of particles including size, density, and organic content, impact their transport and fate. For example, small particles (< 300 μm diameter) are associated with high concentrations of contaminants but are more mobile, thus less likely to settle to pond bottoms.

**RESIDENCE TIME:** This is the most limiting factor to water quality improvement, as the time stormwater spends in a pond controls the degree of both sedimentation and transformation of pollutants.

**NEW POND DESIGNS:** Building ponds with a length to width ratio of at least 3:1, ensuring a large pond surface area relative to the drainage area, and maintaining a pond depth of at least 4 to 6 feet are good design options for improving the quality of water exiting a pond.

**RETROFUNDS:** Options that increase stormwater residence time, such as the installation of sluice gates at outflows and/or the addition of a littoral shelf or forebay, can improve an existing pond’s effectiveness at pollutant removal.

---

**Figure ES.4** Differences in water flows between natural (left) and developed (right) environments. Arrow width indicates the relative volume of each flow. The relative increase in runoff depends on the amount of impervious surface built. Credit: S.C. Sea Grant Consortium, Tidal Creek Habitats: Sentinels of Coastal Health.
Nonpoint Source (NPS) Pollutants (Chapter 3)

Mohammed Baalousha¹, Samantha McNeal¹, and Geoffrey I. Scott¹

Two-thirds of all pollutants impacting water quality are attributed to nonpoint source (NPS) contaminants such as metals, organics, microbes, and nutrients. These are derived from a variety of natural and anthropogenic activities, as shown in the diagram below (Fig. ES.5). Ponds can be highly efficient at removing pollutants, depending on pond geometry, depth, proximity to urban areas, and hydrology. However, this high pollutant loading and low water circulation can contribute to a number of water quality problems within pond basins. Due to settling of particle-bound pollutants, pond sediments can exhibit high concentrations of chemicals that could pose health risks to human, aquatic, and benthic life.

HOT SPOTS: The concentrations of a variety of pollutants, including heavy metals (especially copper, chromium, and cadmium), polycyclic aromatic hydrocarbons (PAHs) that result from combustion reactions, and microbial pollutants are elevated in coastal S.C. pond sediments as compared to estuarine sites. Mixtures of chemical contaminants in sediments may also be toxic to benthic species.

CONTAMINANTS OF EMERGING CONCERN (CECs): These include pharmaceuticals, personal care products, and contemporary use pesticides (CUPs) that have the potential for negative effects on aquatic life. Nanomaterials (titanium, chromium, and iron) were found in several residential and

Figure ES.5 Arrows indicate flows of nonpoint source pollutants from a variety of sources within the environment. Credit: Baalousha et al. (2014) Nanoscience and the Environment, Elsevier.

¹ Center for Environmental Nanomaterials Risk, Department of Environmental Health Sciences, Arnold School of Public Health, University of South Carolina, Columbia, S.C.
golf course ponds. The CUP, chlorpyrifos, was found in 56 percent of S.C. ponds and is often associated with the herbicide atrazine, which is synergistically toxic to crustaceans.

**MICROBIAL POLLUTANTS:** Bacteria and viruses can be introduced to waterways via leaking septic systems, wildlife sources, and pet feces. Bacterial indicators were found to be lower in ponds than in runoff, and similar to concentrations in tidal creeks. Metals found in pond sediments have potential to induce antibiotic resistance in bacterial communities.

**REMOVAL CAPABILITIES:** Stormwater ponds in S.C. can substantially reduce microbial contaminants from runoff, largely via sedimentation. These removal efficiencies, or the percent of bacteria entering in runoff that is trapped by the pond, are highly variable.

**POND DESIGNS FOR WATER QUALITY:** Effective design options to protect downstream water quality include ensuring pond surface area is at least 5 percent of the surrounding impervious surface area, the inclusion of forebays or vegetated littoral shelves to trap sediments, and the construction of multi-pond series rather than stand-alone ponds.

---

**Stormwater Pond Ecology (Chapter 4)**

*Dianne I. Greenfield*¹,², *Erik M. Smith*¹,³, *Andrew W. Tweel*², *Denise M. Sanger* ²,⁴, and *Kimberly Sitta*⁵

Stormwater ponds create unique ecosystems because they have reduced flushing capacity associated with high residence times, making them susceptible to stagnation. Furthermore, they accumulate nutrients from fertilizer runoff and are natural “incubators” for proliferation of algal blooms. Ponds may also serve as valuable permanent and/or transient habitats for a range of species. Given there are essentially no natural open-canopy ponds or lakes in the Southeast coastal plain, these habitats are a direct result of development and have become integral features throughout S.C.’s coastal landscape.

**FISH KILLS:** Hypoxia (low oxygen) resulting from stagnation and decaying algal blooms re-
Figure ES.6 A cyanobacteria bloom in a stormwater pond in coastal S.C. Some cyanobacteria can produce toxins, like microcystin, which may be toxic to aquatic life, wildlife, pets, and humans. Credit: Dianne Greenfield

results in about 68 percent of fish kills in ponds; harmful algal blooms (HABs) account for 27 percent.

**NUTRIENTS:** The relative importance of nitrogen (N) and phosphorus (P) to pond function may be more similar between fresh and saline pond systems than originally thought. Algae can be stimulated by both N and P, rather than just P as the original paradigm suggested.

**HABs:** Elevated N, especially organic sources like urea, stimulates growth of bloom species like cyanobacteria (Fig ES.6) and dinoflagellates. Organic N is used in 50 percent of fertilizers.

**MICROBES:** Fecal coliform and pathogenic *Vibrio* spp. can reach high concentrations in ponds; some bacteria in ponds, including those associated with pet waste, are resistant to antibiotics.

**ANIMALS:** Amphibians, like frogs, breed in ponds but can be disturbed by construction and are susceptible to toxins found in pond sediments. Ponds are common habitat for alligators and are often stocked with fish, including the economically-important American eel (*Anguilla rostrata)*.

**INVASIVE SPECIES:** Ponds can host exotic species; 18 percent of coastal S.C. ponds surveyed by S.C. Department of Natural Resources were found to be infested with invasive apple snails.

**CHANGE:** Water temperature, salinity, connectivity, and rates of exchange are main factors regulating ponds, and the ranges of these parameters will likely change in the future. Future climate scenarios favor further algal bloom developments and increased frequency and severity of HABs.
Policy Lens of S.C. Stormwater Management  
(Chapter 5)

Lori A. Dickes¹, Jeffery Allen², Monika Jalowiecka³, Katie Callahan⁴, Bridget Cotti-Rausch⁵

Similar to many environmental issues, stormwater management operates within a network of layers of regulatory and policy oversight. The Environmental Protection Agency (EPA) defines a stormwater BMP as a “technique, measure, or structural control” that meets permitting requirements by managing the quantity and quality of runoff. In 2007, a review of 511 coastal ponds by S.C. Department of Health and Environmental Control (DHEC) found 15 percent were not in compliance with permitting requirements.

**FEDERAL POLICY:** Most broadly, stormwater falls under the Clean Water Act (CWA) enacted in 1972, a complex regulatory document governing water pollution control.

**FEDERAL PERMITS:** A key section of the CWA is the National Pollutant Discharge Elimination System (NPDES). This program requires counties and municipalities to obtain permits to monitor, reduce, and control pollutants found in stormwater.

**STATE CONTROL:** The federal government gives control to states to enact specific regulatory actions to meet federal permitting requirements. In S.C. this responsibility is held by the S.C. Department of Health and Environmental Control (DHEC).

**MUNICIPAL SEPARATE STORM SEWER SYSTEMS (MS4s):** The NPDES program divides permits into the following categories: regulated MS4s, construction, industrial, and general. In coastal S.C. there are currently 25 MS4-regulated communities. Developers report to the MS4 which then reports directly to DHEC; this process is the regulatory oversight for pond construction.

**LOCAL OVERSIGHT:** In MS4-permitted areas the county or city performs scheduled inspections on private pond systems to ensure all permitted BMPs are in compliance with the NPDES program as administered by DHEC. Though ponds are the most common BMPs, only a minority of surveyed stormwater

professionals believe them to be the best tool for managing runoff (Fig. ES.7).

OLDER COMMUNITIES: Communities built prior to an area becoming designated as an MS4 do not have stormwater management plans and are not inspected by the municipality. However, they are required to maintain all BMPs in a “functional condition.”

COASTAL ZONE: In the coastal counties, additional regulatory requirements falling under the S.C. Coastal Zone Management Program must be met to protect our vital coastal habitats.

![Figure ES.7](https://example.com/image.png)

**Figure ES.7** A survey of stormwater professionals from coastal S.C. cities, towns, and counties designated as MS4s found that only 24 percent believe ponds to be the best tool for stormwater management. Additional questions from the survey suggested incorporation of low impact development (LID) practices into a stormwater management plan was seen as a favorable tool by about 60 percent of respondents.

---

**Economics of Stormwater Management (Chapter 6)**

*J. Wesley Burnett* and *Christopher Mothorpe*

Like all human-developed infrastructure, ponds require maintenance and monitoring throughout their life-cycle to ensure ongoing function and environmental effectiveness. The costs of maintaining ponds often ultimately fall on local, residential homeowners associations (HOAs). However, HOAs may be unaware of their responsibilities or lack knowledge as to whether their ponds are properly serving their designed functions of flood protection and mitigating harmful runoff. Uncertainty is compounded by deficient maintenance budgets.

PUBLIC GOODS: From an economic perspective, ponds are “impure” public goods, meaning they provide both public and private benefits.

PRIVATE PROVISIONS: When public goods are privatized, there can be an under-provision of funds by property owners or HOAs so
ponds are maintained at an inefficient level.

**INCENTIVES:** Some research suggests that governments can combine both credible punishments and incentives such as subsidies, grants, rebates, and installation financing to improve maintenance activities.

**EDUCATION:** Because the public is largely uneducated about stormwater maintenance practices and costs, economists advocate for inclusion of formal educational programs.

**COSTS:** Various studies from throughout the U.S. found annual maintenance costs are between 2 and 8 percent of original construction costs, depending on pond size. Operating and maintenance costs fall as pond size increases. (Fig. ES.8)

**LOCAL COSTS:** From a survey of 58 stormwater practitioners from S.C., we estimated the following costs:

1. Costs of new pond construction are between $17,000 and $33,000 per acre.

2. Annual maintenance costs per pond are between $230 and $760 per year.

3. Therefore, for a 0.54 acre pond (average size of urban ponds in coastal S.C.) annual maintenance is between 1 and 8 percent of the initial construction costs.

*Figure ES.8* Predicted annual life-cycle maintenance costs taken from the available scientific literature, as a function of total construction costs in 2005 U.S. dollars for ponds across the country.

*Notes:* Diamond shaped points represent empirical estimates from the literature. The dashed line represents a line of best fit through the points. The two solid lines represent the 67% confidence interval for the estimates. Source: Weiss et al. (2005, p. 31).
Communication Strategy for Improved Pond Awareness (Chapter 7)

Katie A. Callahan¹, Amy E. Scaroni², C. Guinn Wallover², Melinda Weathers³, Alex Neal⁴

The success of stormwater ponds as BMPs to manage runoff, protect downstream water quality, and comply with regulations relies on several factors: recognition of ownership; awareness of the pond’s purpose; knowledge of pond function and maintenance needs; and responsible care of surrounding landscapes. These elements must factor into outreach messaging if it is to resonate with target audiences (Fig. ES.9) and ultimately protect S.C.’s vital coastal water resources.

SELF-EFFICACY: Is a major factor in addressing pond awareness, understanding, and function. HOAs want to have comprehensive instructions on pond maintenance to share with their residents.

OVERSIGHT: City and county staff in engineering, stormwater, and overall public works departments share common concerns mostly related to practices such as keeping infrastructure and conveyances clear of debris, managing erosion, and preventing flow obstructions from vegetation and sediment build-up.

BARRIERS: There are both real and perceived barriers to education and outreach. For example, attempts to implement widespread use of vegetated buffers are resisted primarily due to misconceptions about cost, function, and HOA covenants restricting planting on shorelines.

POSITIVITY: In visual campaigns, positive images of healthy ponds are more likely to capture the attention of coastal S.C. homeowners rather than those depicting algal blooms, stagnation, or other unsightly pond conditions.

CONNECTIVITY: Outreach messages addressing pond health should be specific, instructive, and connect all community residents’ actions to the performance of the pond(s).

CITIZEN VOICES: The greatest concerns voiced by residents were related to the health of people, pets, wildlife, and the overall ecosystem that is connected to a pond.

Stormwater Pond Audiences and Perceptions

Figure ES.9 Multiple audiences and perceptions affect stormwater pond management and messaging.
CONCLUSION

The S.C. Stormwater Ponds Research and Management Collaborative seeks to ecologically characterize coastal stormwater ponds, understand their functionality and durability, and ultimately develop new and possibly innovative engineering and construction practices. The goal is to ensure that stormwater ponds, both existing and newly constructed, will function without concerns about possible ecological impacts or economic costs associated with their management and maintenance under current and future weather and climate patterns. While prevalent, very little information exists about their effectiveness, long-term functionality, and potential impacts on the adjoining ecosystem. A quantitative assessment of what hydrologic and water quality services ponds provide, and which management practices may maximize these services, is therefore essential to assist coastal communities in better managing their stormwater to preserve vital water quality and aquatic resources.

Faculty and students from many of the Consortium’s member institutions and its own staff are participating in the Collaborative. Bringing together water quality specialists, engineers and ecologists, hydrologists and coastal processes specialists, biologists, public health and marine biomedical professionals, and economists and social scientists will enable us to holistically address these issues. And the results of this state-of-knowledge examination will provide a firm foundation for a large-scale research and development effort which will have economic, environmental, and public health benefits for the state and the Southeast region as it addresses the challenges of continued development, ecosystem and public health, and changes in climate and weather.

3. Capital Improvements Update (NETZINGER)

A. Jarvis Creek Pump Station
Planning continues for major improvements including raising elevation of emergency power cutoff switch boxes, upgrades to electrical distribution, transfer switches and control systems, various safety improvements, and installation of mechanical debris screens to improve operational efficiency. Project is in conceptual design phase. Anticipate receipt of consultant’s report, including cost estimates, scheduling, and recommendations in early February.

B. Sea Pines Pump Station
Reengineering pump wall-mount system. Project is in conceptual design phase. No change is status this month.

C. Wexford Pump Station
Mitigation project to raise and reinforce upstream channel levee to repair damage caused by Hurricane’s Matthew and Irma. Project is in preliminary design phase. Topographic field survey to begin on February 11 with design & permitting to follow in February/March.

D. Wren Pond Emergency Spillway
Installation of an emergency spillway to protect pond embankment during extreme rainfall and tide surge events. Project is in final design phase. Construction scheduled for March.

E. Main Street Weir Safety & Operational Improvements
Installation of deck grating and handrails to improve safety and installation of hardware to improve weir operations. Design completed in January. Price negotiations underway with on-call contractor.

4. Maintenance, Repair & Rehabilitation Projects (UYESUGI/LADD)

A. Completed in December/January ($127,160)
- Sol Blatt Pkwy – pathway flumes: outfall capacity restoration - $5,000
- Yacht Cove lagoon – sediment removal - $7,600
- 11 Spotted Sandpiper – pipe & structure replacement - $15,300
- 79 Fort Walker Drive – channel maintenance (sediment removal) - $9,000
- Leamington – sinkhole repairs at 3 locations - $5,4009
- Harbourside Lane – Sinkhole Repair - $5,000
- Palmetto Hall - Weir Maintenance adjacent to pump station - $2,620
- Mathews Drive – Pathway erosion mitigation- $8,000
- 11 Iron Clad – Sinkhole Repair - $7,000
- Channel Maintenance, workshelf/vegetation – Oakview Channel, Jarvis Creek Channel, Palmetto Headlands, Gum Tree Channel, Wexford/RV Resort Channel, Arrow Road Channel - $45,250
- 71 Wexford Club Drive – System Cleaning - $5,040
- Trench Drain Cleaning – Folly Field Park & Gumtree - $1,570
TVSS Replacement at Jarvis Creek Pump Station - $3,080
11 Flotilla – Pipe replacement - $7,300

B. Underway as of January 31 ($113,380)
- Jarvis Creek Pump Station – Electrical System Repairs - $16,500
- Jarvis Creek Excavation (Nature’s Way to Jarvis Outfall at Cross Island Pkwy. - $96,880

C. Planned for February/March/April ($540,730)
- Main Street Weir Upgrades - $79,500
- Jarvis Lake Flap Gates – Inspection & Repair - $7,200
- Jarvis Creek – Transfer Switch #1 Inspection - $4,030
- Pump Maintenance at Jarvis Creek - $13,000
- Channel Excavation at Sunningdale Lane, Indigo Run - $8,000
- Channel Maintenance, workshelf/vegetation – Old Woodlands, Folly Field Fiddlers Cove Outfall, Ashmore Channel, - $35,000
- 12 Canvas Back Road – pipe installation - $20,000
- 37 Deerfield Road – survey & drainage system improvements - $25,000
- 271 Seabrook Drive – CCTV - $8,000
- 1 Jingle Shell Lane – CCTV & Clean - $5,000
- 9 Bobcat Lane – CCTV & Clean - $5,000
- 20 Ocean Lane – CCTV & Clean/ CIPP - $15,000
- Lighthouse Lane/ Mizzenmast Lane – CCTV & Clean - $15,000
- Long Cove Club – 2 locations – CCTV & Clean - $5,000
- 82 Myrtle Bank Road – CCTV & clean - $10,000
- Ruddy Turnstone – CCTV and Pipe Repair - $80,000
- 12 Valencia Road- Joint Repair - $30,000
- Old Fort Drive – Outfall Stabilization - $150,000
- 14 South Beach Lane – Pipe replacement - $7,000
- 4 Sara Court – Sinkhole - $5,000
- Wexford RV Park/ Powerline Channel – Pipe/Ditch Cleaning - $8,000
- S. Sea Pines Drive at 1 South Beach Lane – Sinkhole Repair - $6,000

5. Master Planning & Modeling Program (COOK)

A. Palmetto Hall/Mitchelville Inventory & Modeling Project
Town held a public meeting on January 28th to allow citizens that live in the Port Royal Sound Watershed to voice their drainage concerns and to learn about the modeling project and the modeling program objectives for the Island as whole. Inventory field work will commence on Monday, February 4.

B. Flood Plain Map Development (HHP, PRP and Point Comfort)
Town is drafting an RFQ for advertisement. Project will develop inundation maps for various design storms for several watersheds where inventory and modeling tasks have previously been completed. No change is status this month.
C. Gum Tree/Squire Pope/Stoney Inventory & Modeling Project
FY19 budgeted project planned for advertisement in Q4. No change is status this month.

D. Indigo Run/Gardner/Jonesville Inventory & Modeling Project
FY19 budgeted project planned for advertisement in Q4. No change is status this month.

6. Other Activities / Items of Interest (NETZINGER)

- Standardization of PUD Maintenance Agreements
  - Draft boilerplate document shared with Town Council Finance and Administrative Committee and discussed during December 18th meeting. Process by which other (smaller) POAs can apply for service was also presented and discussed.
  - Meeting with PUDs to present and discuss the draft document was held on January 23rd
  - Revised schedule for implementing the standardization was issued to the PUDs on Feb 1.

- Staffing: Storm Water Inspector
  - Position is currently vacant
  - Advertised in January / Closes on February 5th.

CITY OF BEAUFORT

TO: Eric Larson, P.E.

FROM: Neil Desai, P.E.

DATE: February 6, 2019

SUBJECT: Stormwater Utility Board Report

The following is the City of Beaufort Public Works Department monthly report from January 1 to January 31, 2019

1) CAPITAL IMPROVEMENTS UPDATE

a) Mossy Oaks Drainage Project – City is awaiting permitting approvals from state and federal agency. Task force meeting scheduled for February 27th.

b) Azalea Project – Public Works staff has begun work on the project.

c) Greenlawn Streetscape – Water Quality component with manufactured device at outfall.
2) **MAINTANCE & REPAIR UPDATE**

   a) Routine maintenance of drainage easement City wide.

Re: Maintenance Project Report

This report will cover two major projects and six minor projects. The Project Summary Reports are attached.

**Major Projects – Storm Drainage System Improvements:**

- **Huspah Court S – Sheldon (SWUD 5):** This project improved 1,608 feet of drainage system. The scope of work included bush hogging 301 feet of channel, grubbing and clearing 303 feet of workshelf, cleaning out 730 feet of roadside ditch, 575 feet of channel, repairing a washout, installing 2 twin driveway pipes, rip rap and hydroseeding for erosion control. The total cost was **$31,895.47.**

- **Middlefield Circle – Sheldon (SWUD 5):** This project improved 9,077 feet of drainage system. The scope of work included removing a blockage from the flowline, cleaning out 6,047 feet of roadside ditch, 3,030 feet of channel, jetting 4 access pipes, 5 crossline pipes and 6 driveway pipes. The total cost was **$17,640.13.**

**Minor or Routine Projects:**

- **Sheldon Bush Hog - Sheldon (SWUD 5):** This project improved 148,451 feet of drainage system. The project scope included bush hogging 142,171 feet of channel and 6,280 feet of roadside ditch. The total cost was **$74,230.53.**

- **St Helena Island Bush Hog – St Helena Island (SWUD 8):** This project improved 87,019 feet of drainage system. The scope of work included bush hogging 83,166 feet of channel and 3,853 feet of roadside ditch. The total cost was **$49,512.01.**

- **Lady’s Island Valley Drains – Lady’s Island (SWUD 7):** This project improved 30,169 feet of drainage system. The scope of work included cleaning out 30,169 feet of valley drains. The total cost was **$16,809.59.**

- **St Helena Island Valley Drains – St Helena Island (SWUD 8):** This project improved 44,154 feet of drainage system. The scope of work included cleaning out 44,154 feet of valley drains. The total cost was **$13,816.78.**

- **Jasmine Hall Road – Sheldon (SWUD 5):** This project improved 3,996 feet of drainage system. The scope of work included cleaning out 3,996 feet of roadside ditch. The total cost was **$9,843.54.**
- **Taylor Street/Peace Haven Drive – Port Royal Island (SWUD 6):** This project improved 100 feet drainage system. The scope of work included cleaning out 100 feet of roadside ditch and jetting 1 driveway pipe. The total cost was **$1,001.01.**
**Project Summary:** Huspah Court S

**Activity:** Routine/Preventive Maintenance

**Duration:** 03/01/18-07/16/18
